

Case Study: Intellex

Business Challenge:

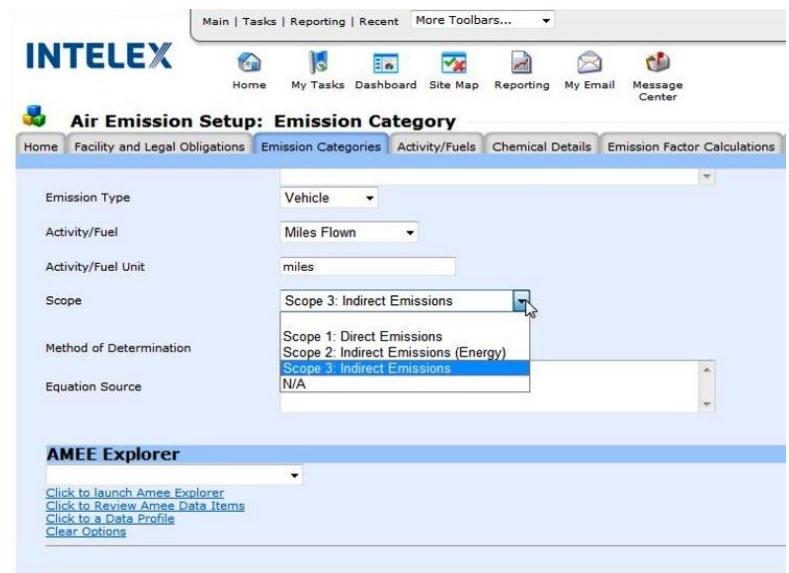

Intellex, a global leader in Environment, Health and Safety and Quality (EHSQ) software solutions, wanted to enhance the usability and content of its market-leading emissions management SaaS application. Market research highlighted the need to allow their customers to better understand the environmental data they were using. Intellex's challenge was to gather a large amount of complex environmental data, and make sure it is current, accurate and useful to clients on an ongoing basis – all within a limited budget and short product development timeline.

Solution:

Intellex integrated AMEEdiscover directly into its [Air Emissions Management module](#). Customers using the module now have environmental information, ranging from simple to complex, at their finger-tips. These environmental metrics include emissions factors, embodied emissions, industrial process algorithms and reporting frameworks. Intellex's team worked with AMEE engineers to perform the integration so that updates to data in AMEE would automatically flow through to Intellex's application, thereby eliminating ongoing maintenance work. Read more in [Intellex's press release](#).

Results:

- Extensive, verified environmental intelligence easily accessible to end users.
- High positive customer response to new release showing appreciation for innovation and a customer-centric focus.
- Seamless integration between AMEEdiscover and Intellex's application.
- Maintenance costs eliminated through automated updates.
- Quick, well-executed integration that minimized development costs and disruption to the product development.

Benefits: Why Intellex Chose AMEE

Knowledge Leadership: Intellex appreciated AMEE's deep domain expertise to deliver accurate information in the appropriate areas to deliver against the end-user requests.

Focus: Intellex wanted to maintain focus on their core business – delivering great software. AMEE was well-placed to deliver against the non-core but essential need to aggregate and manage data.

Cost: AMEE delivered the integration within weeks at a price that fitted within existing product development budgets while also avoiding any ongoing maintenance costs.

Through this partnership we'll be able to provide a complete, cost-effective solution for companies around the globe to address the rapidly changing requirements of GHG legislation.
